

# MVA85A Study Timeline

Trials of the TB vaccination booster MVA85A have been carried out with nearly 2800 infants to date. This timeline shows the seeming disconnect between the publication dates of the (largely unfavourable) animal studies and the continuation of the human studies. The omission of animal studies in investigator brochures is also shown.

**Key**

- Parenteral delivery
- Mucosal delivery
- Aerosol delivery
- Mice
- Guinea pigs
- Primates
- Cattle
- Adults
- Infants
- Children
- Adults and adolescents
- Study started
- Study submitted
- Study finished
- Study published
